# Kunal Patil

Gen AI Solution Architect | Agentic AI • RAG • LangChain • AWS  
Bedrock | Cloud-Native BFSI & Healthcare Leader | AWS Certified |  
20+ Years experience  
Pune Division, Maharashtra, India

## Summary

I architect systems where AI does real work - not demos. Over 20 years across BFSI, Healthcare, Telecom, Retail and products, I've led cloud transformation programs that move the needle: \$25M in client savings through middleware modernisation, 78% API uptime improvement through intelligent rate-limiting and caching, and 14% revenue uplift through omnichannel AI-driven communication. Today, my focus is Agentic AI and Generative AI architecture. I am currently building an Agentic Ops Platform for a leading Healthcare & Pharma client - a cloud-native system that converts SOP-driven workflows into structured, executable AI agent configurations using LangChain, LangGraph, AWS Bedrock, and serverless AWS infrastructure. I work hands-on across the full GenAI stack: RAG pipeline design, prompt engineering, chunking & preprocessing strategies, embedding models, vector databases, LLM orchestration, and Model Context Protocol (MCP). Core architecture competencies: → Agentic AI Systems | LangChain | LangGraph | RAG | AWS Bedrock | Claude on Bedrock → Prompt Engineering | Chunking & Embedding | Vector Databases | LLM Orchestration → AWS Serverless (Lambda, API Gateway, DynamoDB, S3) | Microservices | Event-driven Architecture → BFSI & Healthcare Domain | Cloud Transformation | API Modernisation AWS Certified Enterprise Architect. Architecture Review Board founder. Mentor to junior architects. Open to senior and principal GenAI / AI Solution Architect roles where I can design systems that scale, deliver measurable business value, and push what AI can operationally achieve.

---

## Experience

Nagarro  
Associate Distinguished Engineer  
September 2021 - Present (4 years 11 months)

## Pune Division

Leading Agentic AI and cloud architecture engagements across BFSI and Healthcare verticals.

### Agentic Ops Platform (Healthcare & Pharma | Dec 2025 – Present)

Designed and built a cloud-native Agentic AI platform that converts SOP-driven business processes into structured, executable task configurations for autonomous AI agents.

- Architected backend across AWS API Gateway, Lambda, DynamoDB, and S3 with full serverless design
- Built SOP parsing, validation, step-normalisation, and agent-configuration services to transform free-text SOPs into structured JSON task steps using AWS Bedrock (Claude)
- Designed Agentic AI orchestration layer using LangChain and LangGraph patterns for agent configuration, execution readiness, and workflow automation
- Implemented data access adapters and repositories for DynamoDB, S3, agent config, and multi-tenant client/project persistence

Stack: Python · LangChain · LangGraph · AWS Bedrock · Lambda · API Gateway · DynamoDB · S3 · REST APIs

### BFSI Cloud Transformation (Banking clients | 2021 – 2025)

- Modernised IBM-based middleware to AWS API Gateway → \$25M in client savings
- Improved API uptime by 78% through data-driven rate-limiting, timeout, and caching strategies
- Introduced WhatsApp-based omnichannel communication layer → 14% revenue uplift
- Founded Architecture Review Board; embedded documentation culture and mentored junior architects

## Mobiquity Inc.

4 years 2 months

### Principal Engineer

November 2019 - August 2021 (1 year 10 months)

## Pune Division

Served as technical authority across client delivery in Banking and Retail, owning end-to-end architecture, engineering leadership, and solution design for multi-disciplinary teams spanning DEV, QA, DevOps, and Analytics.

- Reduced time-to-market by 12% through concurrent design, engineering, and testing execution across project streams
- Designed and delivered Technical Architecture and Technical Design Documents as the baseline for all client engagements
- Built and validated POCs for pre-sales and solution teams, directly enabling new business conversations
- Led third-party library evaluation and governance, reducing technical risk in vendor selection
- Owned project estimation, capacity planning, and scope adherence reporting to engineering leadership

#### Key projects:

- Ila Bank Jordan — Digital banking platform architecture
- Kum & Go — Fuel Pay and Kerbside Pickup mobile commerce solution

#### Tech Lead

July 2017 - November 2019 (2 years 5 months)

Pune Division

Led technical delivery for high-profile clients including Amazon and Forrester, managing cross-functional engineering teams and driving quality from design through deployment.

- Delivered end-to-end technical execution for Amazon's flagship live events: re:MARS 2019, re:Invent 2018 and 2017 — high-visibility, zero-downtime engagements
- Owned full-stack delivery (DEV, QA, DevOps, Analytics) across concurrent client projects
- Managed estimation, capacity planning, and escalation metrics for engineering leadership
- Established scope adherence processes that improved delivery predictability across teams

#### Key projects:

- Amazon re:MARS 2019 | re:Invent 2018 & 2017 — Event technology platforms
- Forrester TAP App & TAP Web — Research and analytics platforms
- Mister Car Wash — Customer-facing digital platform

#### Citi

Manager (Tech Lead)

June 2015 - July 2017 (2 years 2 months)

## Pune Division

Managed a 20-person engineering team delivering mission-critical financial systems for Citi's global operations, combining technical leadership with end-to-end delivery accountability.

- Led full project lifecycle — from Technical Design Document through delivery — for complex, regulatory-driven financial systems
- Managed capacity planning and estimation for a 20-member cross-functional team across concurrent workstreams
- Delivered system enhancements and infrastructure upgrades with strict scope and compliance adherence
- Acted as primary escalation point for technical and delivery risk across both projects

### Key projects:

- Trade Records Information Management System — Core trade data platform for global operations
- China VAT Implementation — Regulatory compliance system supporting Citi's Asia-Pacific tax obligations

## Tieto

### Lead Software Engineer

December 2009 - May 2015 (5 years 6 months)

## Pune Division

Led software engineering for Tieto's Nordic banking and telecom clients, owning technical design, large-scale deployment, and cross-functional delivery across long-running programmes.

- Increased platform uptime by 20% through architectural improvements and proactive system optimisation
- Translated complex customer and system requirements into robust, scalable software designs
- Orchestrated large-scale software deployments including testing strategy, defect resolution, and release management
- Developed backend systems in Java, integrating enterprise platforms and digital repository frameworks
- Converted business requirements into user stories, bridging product and engineering effectively

### Key projects:

- Nordea — Payment Service Agreement and First Card platform (Nordic banking)
- ComHem — End-user and retailer portal (Swedish telecoms)
- Telia — SIMbase platform (mobile SIM provisioning)

## Clarice Technologies

### Sr. Software Engineer

November 2008 - December 2009 (1 year 2 months)

Pune Division

Designed and delivered software solutions exceeding client specifications, contributing to system monitoring, recovery, and performance optimisation.

- Developed system monitoring, backup, and recovery procedures to ensure operational resilience
- Gathered and defined customer requirements into clear technical specifications for project execution
- Proactively resolved performance bottlenecks and defects, improving system stability

#### Key project:

- Librato Load Manager — Load management and performance monitoring platform

## Spartan Labs

### Software Engineer

August 2007 - October 2008 (1 year 3 months)

Pune Division

Contributed to product engineering and codebase modernisation, delivering unit-tested, performant software within client timelines.

- Modernised legacy codebases to current development standards, reducing operating costs and improving maintainability
- Designed technology solutions aligned to project specifications and performance requirements

#### Key project:

- Digital HomeSoul - Spartan's flagship consumer digital home product

## Inbitech Solutions

### Software Engineer

May 2006 - August 2007 (1 year 4 months)

Kolhapur, Maharashtra, India

Built foundational software engineering skills delivering a customer-facing product from requirements through deployment.

- Wrote maintainable, well-structured code consistently praised by subsequent developers for clarity and extensibility
- Refactored legacy modules to modern standards, reducing operating costs and improving long-term functionality
- Delivered unit-tested systems within prescribed timelines and budget constraints

Key project:

→ Mobile Ticket Reservation System — Inbitech's mobile ticketing product

---

## Education

Shivaji University

Bachelor of Engineering - BE, Information Technology · (2001 - 2006)
